Foreword

EUROSTAT, the statistical office of the European Union and the Statistics Division of the African Union Commission are proud to present this yearbook offering for the first time a wide statistical picture of EU and AU member States.

EUROSTAT, at the centre of the European Statistical System, cooperates regularly with the African Statistical System at regional and continental levels, making use of the European experience in the field of economic integration and statistical harmonisation.

In recent years, in the framework of the partnership between the EU and the African Union Commission (AUC), there has been a considerable increase in the breadth and depth of statistical cooperation between EUROSTAT and the Statistics Division of the AUC.

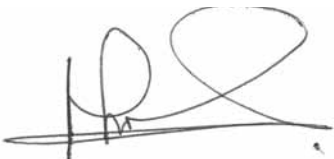

The other African partners at continental level are the African Centre for Statistics (ACS) of the United Nation Economic Commission for Africa (UNECA) and the Statistics Department of the African Development Bank (AfDB).

These statistical partners (AUC, UNECA and AfDB), together with the African Capacity Building Foundation (ACBF), constitute the African Statistical Coordination Committee. They cooperate in the preparation of the yearly African Statistical Yearbook and other strategic initiatives for statistical development on the African continent.

The present publication, which is largely based on the African Statistical Yearbook 2011 and the matching EU27 data, is a milestone for the cooperation between the statistical offices of the European Union and of the African Union.

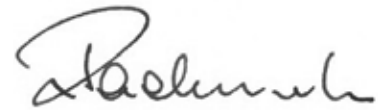

We wish to thank all those who have contributed to the preparation of this joint publication. We remain convinced that having reliable, comparable and accessible information will make a major contribution to improve the partnership and the dialogue between the two Commissions.

We hope to repeat the experience of producing joint publications in the framework of our efforts to generate quality and credible statistics for the two Unions and all statistics users.

Dr. Maxwell M. Mkwezalamba

Introduction

Africa-EU Strategic Partnership

The African Union and the European Union work in partnership on a range of important issues referred in the 2nd Action Plan. The 3rd Africa EU Summit took place on 29-30 November 2010, in Tripoli, Libya. The Summit shaped the future relations between two continents and adopted Tripoli declaration and the 2nd Action Plan 2011-2013.

This plan builds up on experience gained from the 1st Action Plan, and political objectives enshrined into the 2007 Joint Africa-EU Strategy (JAES) which defines the long-term policy orientations between the two continents, based on a shared vision and common principles ⁽¹⁾.

The four main objectives of the JAES are:

- improving the Africa-EU political partnership
- promoting:
 - o peace, security, democratic governance and human rights
 - o basic freedoms, gender equality
 - o sustainable economic development, including industrialisation
 - o regional and continental integration
 - o ensuring that all the Millennium Development Goals are met in all African countries by 2015
- effective multilateralism
- a people-centred partnership.

The Strategy's Second Action Plan sets out cross cutting issues and eight areas for strategic partnership for 2011-2013:

1. Peace and Security
2. Democratic Governance and Human Rights
3. Regional Economic Integration, Trade and Infrastructure
4. Millennium Development Goals
5. Climate Change
6. Energy
7. Migration, Mobility and Employment
8. Science, Information Society and Space

The African Union is a continental organisation founded in 1999 and its main objectives were to rid the continent of the remaining vestiges of colonisation and apartheid; to promote unity and solidarity among African States; to coordinate and intensify cooperation for development; to safeguard the

sovereignty and territorial integrity of Member States and to promote international cooperation within the framework of the United Nations.

The vision of the African Union is that of: "An integrated, prosperous and peaceful Africa, driven by its own citizens and representing a dynamic force in global arena."

The African Union Commission is the key organ playing a central role in the day-to-day management of the African Union. Among others, it represents the Union and defends its interests; elaborates draft common positions of the African Union; prepares strategic plans and studies for the consideration of the Executive Council; elaborates, promotes, coordinates and harmonizes the programmes and policies of the African Union; ensures the mainstreaming of gender in all programmes and activities of the African Union.

The mission of the African Union Commission is to become "An efficient and value-adding institution driving the African integration and development process in close collaboration with African Union Member States, the Regional Economic Communities and African citizens".

The European Union was created in the aftermath of the Second World War. The first steps were to foster economic cooperation: countries that trade with one another are economically interdependent and will thus avoid conflict. Since then, the union has developed into a huge single market with the euro as its common currency. What began as a purely economic union has evolved into an organisation spanning all areas, from development aid to environmental policy.

The European Union actively promotes human rights and democracy and has the most ambitious emission reduction targets for fighting climate change in the world. Thanks to the abolition of border controls between European Union countries, it is now possible for people to travel freely within most of the European Union.

The European Commission is one of the main institutions of the European Union. It represents and upholds the interests of the EU as a whole. It drafts proposals for new European laws. It manages the day-to-day business of implementing EU policies and spending EU funds.

EUROSTAT is a specialised Directorate General of the European Union Commission and the Statistics Division of the African Union Commission is the Statistic Division of the African Union Commission's Department of Economic Affairs. They cooperate more and more in all eight areas for strategic partnership and in particular in the Regional Integration, Millennium Development Goals, Energy, Migration, Mobility and Employment.

⁽¹⁾ For more details, see <http://www.africa-eu-partnership.org>

The publication

This statistical book presents a range of statistics on African and European countries.

The first chapter gives an overview of demography, key economic indicators and external trade in Africa, Europe and some selected countries or world regions.

Then, seven thematic chapters present balanced sets of key indicators for the following sectors: demography, health, education, national accounts, economy and finance, industry and services and external economic relations. Two tables are available for each indicator, one presenting data for the African countries and the other one for the European countries.

The data presented in this publication cover the period from 2001 to 2010, or up until the last year for which data are available. Each table presents indicators for African and European countries.

Data sources

The statistics shown in this publication for the African countries have been provided by the Statistics Division of the African Union Commission in May 2011. These data were produced by the National Statistical Institutes or National Central Banks of the African countries or by international organisations (United Nations, OECD, IMF, World Bank and ILO).

EU-27 data presented in this publication have been processed and calculated by Eurostat on the basis of information provided by the National Statistical Institutes of the 27 Member States of the European Union. The information was extracted from Eurostat reference database (Eurobase) during June and July 2011.

Countries and organisations

The aggregate Africa presented in this publication includes the following countries:

Algeria, Angola, Benin, Botswana, Burkina Faso, Burundi, Cameroon, Cape Verde, Central African Republic, Chad, Comoros, Congo, Côte d'Ivoire, Democratic Republic of Congo, Djibouti, Egypt, Equatorial Guinea, Eritrea, Ethiopia, Gabon, Gambia, Ghana, Guinea, Guinea-Bissau, Kenya, Lesotho, Liberia, Libyan Arab Jamahiriya, Madagascar, Malawi, Mali, Mauritania, Mauritius, Morocco, Mozambique, Namibia, Niger, Nigeria, Rwanda, Sao Tome and Principe, Senegal, Seychelles, Sierra Leone, Somalia, South Africa, Sudan, Swaziland, Tanzania, Togo, Tunisia, Uganda, Zambia and Zimbabwe.

Please note that statistics for Morocco are presented in this publication, but Morocco is not a member of the African Union.

The aggregate EU-27 presented in this publication includes the following countries:

Belgium, Bulgaria, Czech Republic, Denmark, Germany, Estonia, Ireland, Greece, Spain, France, Italy, Cyprus, Latvia, Lithuania, Luxembourg, Hungary, Malta, Netherlands, Austria, Poland, Portugal, Romania, Slovenia, Slovakia, Finland, Sweden and United Kingdom

European Free Trade Association (EFTA) countries are:

Iceland, Liechtenstein, Norway and Switzerland

Candidate countries to the entrance in the European Union are:

Montenegro, Croatia, the former Yugoslav Republic of Macedonia and Turkey

Rounding

Values and the calculations made on the basis of these values (percentages, growth rates) have been rounded, usually to the first decimal point. The sum of the individual values (or percentages) may differ slightly from the total value (or from 100%).

Valuation

All data in value are expressed in Euros. Data for the African countries were provided to Eurostat in US Dollars or in national currencies; they were converted into Euros on the basis of the exchange rates published by the European Commission available in InforEuro (<http://ec.europa.eu/budget/inforeuro/>)

Eurostat data code

Source codes have been inserted after each table and graphic in this publication to help readers access easily the most recent data on the Eurostat website. Within the PDF version of this publication, the data codes under each table and graphic are presented as Internet hyperlinks.

Overview

1

Chapter 1 - Overview

A variety of harmonised statistics illustrates the developing relations between the EU-27 and Africa and provides important information to the political and business leadership in both continents. Data about other regions/countries is also included to give a more rounded picture of relations between EU and Africa on one side and the world as a whole on the other side.

The indicators covered in this overview are:

- Demographics
- Economic performance
- Prices
- International trade with particular reference to petroleum products and cereals

Population

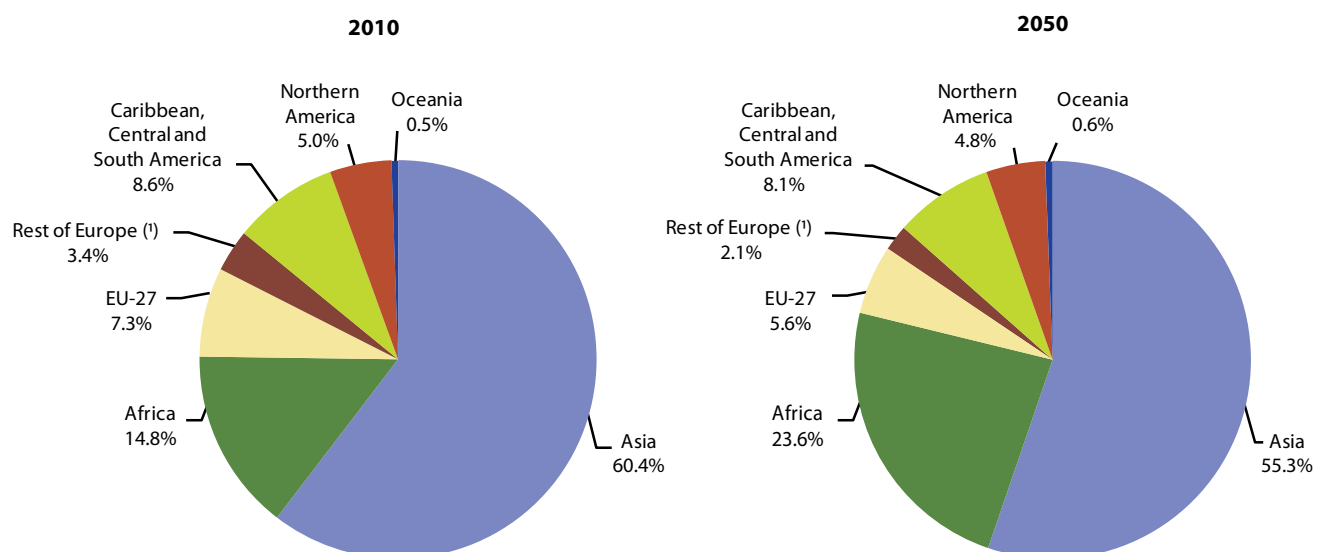

With the world's population approaching 7 billion inhabitants in 2010, Africa had the second largest continental population at 1 billion, behind the 4.2 billion of Asia (Table 1.1, Figure 1.1). However, the growth rate of Africa's population at 2.4% per year between 1995 and 2010 is the highest, double the 1.2% growth rate for the world total. In contrast, the population of Europe barely changed over the same period, though the EU-27 growth rate averaged 0.3% per year. The outcome is that Africa's population rose from 721 million in 1995, slightly less than the European total of 727 million, to over 1 billion in 2010, substantially more than the European total of 738 million and twice the EU-27 total (501 million).

Among European countries, Africa's population was more than 7 times larger than that of the Russian Federation. Africa's population has been growing faster than either China (0.7%) or India (1.6%), while still remaining below the figures for both those countries in 2010. In contrast, Africa's population in 2010 was above the total for Northern and Southern America and more than three times the figure for the United States. In 2010, Africa accounted for some 15% of the world's population compared to 11% for Europe and 7% for the EU-27.

In terms of population density, Africa had 39 people per km², below the world average of 51 and the figures for Europe (116) and Asia (130). Within Asia, three countries had very high population densities, India (373), Japan (325) and China (140). All the other groupings and countries had population densities lower than Africa, including the United States with 32.

Population projections up to 2050 (Figure 1.2) show a continuation of this trend with Africa's population forecast to more than double between 2010 and 2050 to reach over 2 billion. Over the same period, the population of Europe as a whole, after an initial increase, is projected to decline between 2020 and 2050. Within the European total, EU-27 population is projected to continue growing up to 2040 before declining in the final decade to 2050. Of interest is that the population of the Russian Federation is projected to decline over the period to 2050, in which year, Africa's population is likely to be 17 times the Russian figure. While Asia continues to have the largest continental population, its projected growth rate is more modest than that of Africa.

Economic performance

Table 1.2 shows the relative economic performance of the EU-27 and Africa compared to other selected countries and the world total. In 2009, the EU-27 GDP stood at nearly EUR 12 billion whilst the figure for Africa was EUR 1 billion. In comparison, the figure for the USA was EUR 10 billion, EUR 3.6 billion for Japan and China; and around EUR 1 billion for Brazil, India, Canada and the Russian Federation. As a share of the world total, both the EU-27 and Africa have seen their share grow since 2001 with Africa reaching a share of 2.5% in 2009 compared with 1.8% in 2001. The other countries showed varying fortunes. Both the USA and Japan recorded a decline in the share of the world total, while China, Brazil, India and the Russian Federation all recorded rises, substantial in the case of China.

A different perspective emerges when comparing GDP per capita. Here, for the USA and Japan, despite the decline in their GDP measured in EUR, their GDP per capita was around EUR 30 000. Canada also shares such a level, which is well above that of any of the other countries shown. The EU-27 GDP per capita reached nearly EUR 24 000 in 2009, a solid rise since 2001. In contrast, the figure for Africa was EUR 1 500 in 2009, a 28% rise since 2001. Of the other countries, the Indian figure was lower than Africa in 2009 at EUR 860 with the Russian Federation and Brazil at around EUR 6 000 in the same year. The Russian Federation growth rate between 2001 and 2009 was 165%. China recorded a figure of EUR 2 700 in 2009, more than doubling since 2001.

Table 1.2: GDP at current prices

Source: Statistics Division AUC, World Bank and Eurostat (online data code: nama_gdp_c).

Prices

Figure 1.3 shows the movements in consumer prices in the EU-27 and Africa from 2000 to 2010 and the United States and Japan from 2000 to 2009. Price movements in Africa have been substantially greater than in the EU-27 and the other two countries. The price index for Africa reached 212 in 2010 where 2000 = 100, while the equivalent figure for the EU-27 was 124. The United States' figure for 2009 was similar to the EU-27 while prices in Japan in 2009 were below their 2000 level. On average, African inflation ran at a rate of 8% per year between 2000 and 2010 while the figure for the EU-27 was 2% per year. The rate in the United States up to 2009 was 2½% per year while Japan recorded a ¼% per year fall. In particular, there was a strong upward movement in the inflation rate in Africa in 2008 and 2009 while the upturn

in the EU-27 in 2008 was followed by a sharp deceleration in 2009. The EU-27 pattern is reflected in developments in the United States and Japan except that both countries saw prices decline in 2009. Much of the difference in price performance can be explained by the very different state of development in Africa compared to the other countries or country groupings.

Figure 1.3: Consumer price index (2000=100)

Source: Statistics Division AUC and Eurostat (online data code: [prc_hicp_aind](#))

International trade

Africa accounted for around 1/8th of EU-27 value of imports and exports in 2010 (Figure 1.4). This contrasts with the situation for Asia which accounted for 60% of EU-27 imports but less than half (46%) of exports. The reverse was true for Northern America with 28% of exports but 18% of imports.

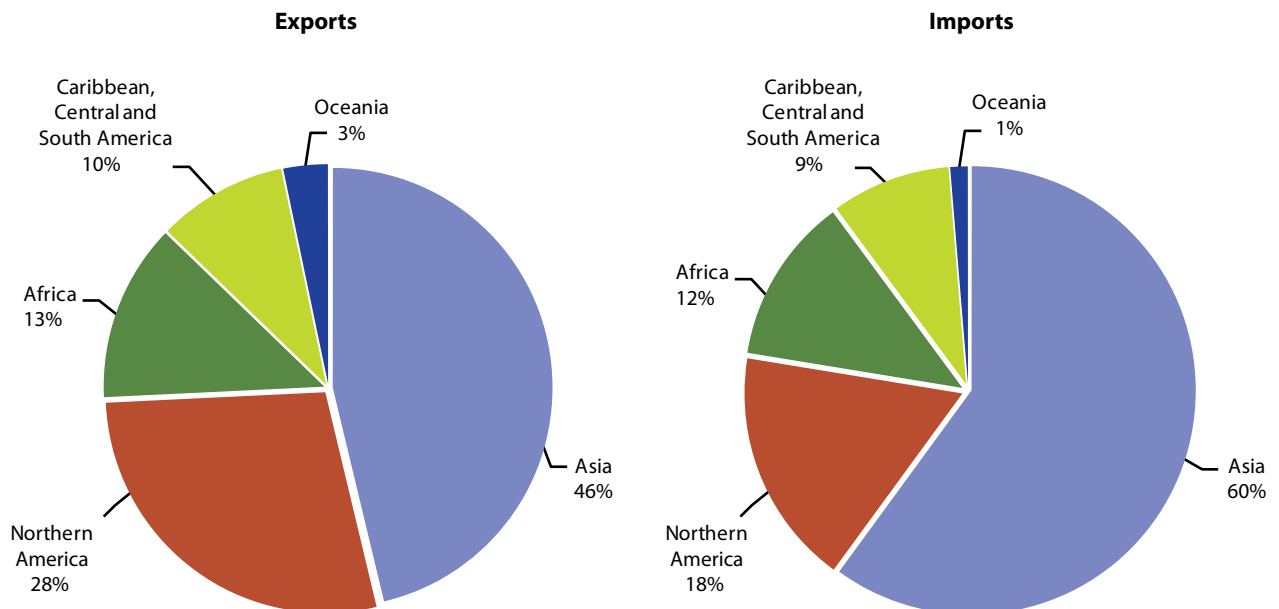

Looking at the volumes traded, the EU-27's major import from Africa was crude oil (Table 1.4). For this product, Africa in total has been second only to the Russian Federation as an import source since 2005. In 2010, of total crude oil imports from Africa of 114 million tonnes, Libya with 52 million tonnes was the major source, making Libya the third most important supplying country after the Russian Federation and Norway. Within Africa, Nigeria at 22 million tonnes came next, followed by Algeria and Angola, both supplying a little under 10 million tonnes. In earlier years, Algeria was a much more substantial source, accounting for 25 million tonnes in 2005.

For exports, there was a reverse flow of refined oil products to Africa, amounting to some 22 million tonnes in 2010, nearly double the 2005 figure (Table 1.5).

This made Africa second only to the USA as a destination for EU-27 exports of refined petroleum products. Within the African total, Nigeria was the largest market, taking nearly 8 million tonnes, compared with 2.5 million tonnes in 2005. This made it the second most important market in 2010 behind the USA. Of the remaining African countries, only Libya took more than 2 million tonnes in 2010.

A second major EU-27 export category for Africa was cereals (Table 1.6). Exports to Africa at 18 million tonnes accounted for more than half the total EU-27 exports of 34 million tonnes. On their own, the five North African countries (Algeria, Egypt, Morocco, Libya and Tunisia) took some 12 million tonnes in 2010. Algeria took 4.5 million tonnes, while Egypt and Morocco took 2.5 million tonnes. As Figure 1.5 shows, the North African countries formed 5 out of the top 6 markets for EU-27 cereals in 2010, with only Saudi Arabia in second place disturbing the pattern.

Definitions

Population on 1 January: the inhabitants of a given area on 1 January of the year in question (or, in some cases, on 31 December of the previous year). The population is based on data from the most recent census adjusted by the components of population change produced since the last census, or based on population registers.

Mid-year population relates to de facto population - i.e. all persons who are present in a given area - on a date close to 1 July. It includes, for instance, all foreigners on holiday in that area on the reference date and excludes residents on holiday in another area.

Life expectancy at birth is the average number of years a newborn infant would live if prevailing patterns of mortality of the total population at the time of his/her birth were to remain the same throughout his/her life.

Economically active population: the economically active population comprises all employed and unemployed persons (including those seeking jobs for the first time). It covers employers, persons working on their own account, salaried employees, wage earners, unpaid family workers, cooperative workers, and members of the armed forces.

Definitions

For African countries, the figures for **physicians** and **nurses** relate to those registered at the government offices. The number of **hospital beds** refers to public and private hospitals.

For European countries, data on **health care staff** relate to 'manpower' active in the health care sector (doctors, dentists, nurses, etc.). These data refer to 'practising' staff, i.e. health care professionals providing services directly to patients.

Data on **health care facilities** relate to technical capacity dimensions (hospital beds, beds in nursing and residential care facilities, etc.).

Common definitions for the different categories of health care staff (doctors, nurses, etc.) and available beds in hospitals were agreed between Eurostat (Statistical Office of the European Union), OECD (Organisation for Economic Co-operation and Development) and WHO (World Health Organisation). The detailed definitions are available at:

http://circa.europa.eu/Public/irc/dsis/health/library?l=/methodologiessandsdatasc/health_care/estat-oecd-definitions-c/_EN_1.0_&a=d

Health expenditure is provided according to the classification of the functions of government (COFOG). This indicator is expressed as a proportion of total general government expenditure (for European countries, it has been calculated as the proportion of general government health expenditure in total general government expenditure).

Education

Definitions

Data on education relate to public and private schools. The reference years correspond to the beginning of the school/academic year.

The [International Standard Classification of Education \(ISCED\)](#) is the basis for international education statistics, describing different levels of education among other characteristics. ISCED level 1 is primary education, which begins between 5 and 7 years of age and is compulsory in all countries. ISCED level 2 is lower secondary education, which continues the basic programmes of the primary level, although teaching is more subject-focused.

[Primary level of education \(ISCED level 1\)](#)

Programmes are normally designed to give students a sound basic education in reading, writing and mathematics along with an elementary understanding of other subjects such as history, geography, natural science, social science, art and music. In some cases religious instruction is featured.

[Teaching staff at a specific level](#)

Teachers are defined as persons whose professional activity involves the transmission of knowledge, attitudes and skills, as laid out in a formal curriculum programme, to students enrolled in a formal educational institution at a specific level (primary, secondary or tertiary).

[Students/pupils](#) are defined as any individual participating in educational services. The number of students/pupils enrolled refers to the count of students/pupils studying in the reference period, i.e. the school/academic year.

[First-level student enrolment](#) is the number of pupils enrolled at the primary level of education, regardless of age.

[Public expenditure on education](#) is dedicated to financing current and capital expenditure of educational institutions; supporting students and their families with scholarships and public loans, and transferring public subsidies for educational activities to private firms or non-profit organisations (transfers to private households and firms). This indicator is expressed as a proportion of total general government expenditure (for European countries, it has been calculated as the proportion of general government education expenditure in total general government expenditure).

Definitions

National accounts data for the African countries are obtained from various national sources and supplemented with data from international sources such as the UN Yearbook of National Accounts and the AfDB (African Development Bank) and ECA (Economic Commission for Africa) African Centre for Statistics estimates. Where necessary, official figures have been adjusted to conform to the System of National Accounts (SNA). Many countries continue to compile their national accounts in accordance with the 1968 SNA, but more and more are adopting the 1993 SNA. A few countries still use concepts from older SNA guidelines, including valuations such as factor cost, in describing major economic aggregates.

For European countries, annual national accounts are compiled in accordance with the European System of Accounts (ESA 1995). The 1995 ESA is broadly consistent with the System of National Accounts of the United Nations (1993 SNA) as regards the definitions, accounting rules and classifications.

Gross Domestic Product (GDP) measures the total final market value of all goods and services produced within a country during a given period. GDP is the most frequently used indicator of economic activity and is most often measured on an annual or quarterly basis to gauge the growth of a country's economy between one period and another. GDP is also a measure of total consumer, investment and government spending plus the value of exports minus imports. GDP is the most widely used indicator from the System of National Accounts (SNA). Its methodology is standardised internationally thus enabling comparison between countries anywhere in the world.

GDP growth rate is calculated as the increase in GDP relative to the previous year, in percentage. GDP is measured at constant prices in national currency, in order to calculate a growth measure that is not influenced by price inflation and by variations in the exchange rates.

GDP per capita is an indicator that is derived through the division of GDP by the total population.

(1) Harmonised Index of Consumer Prices (HICP).

Source: Eurostat (online data code: prc_hicp_aind)

Definitions

General government sector is defined in ESA95 as including “all institutional units which are other non-market producers whose output is intended for individual and collective consumption, and mainly financed by compulsory payments made by units belonging to other sectors, and/or all institutional units principally engaged in the redistribution of national income and wealth”.

Government revenue includes all non-repayable receipts, required and unrequired, current and capital, and noncompulsory, non repayable, unrequired receipts from other governments (domestic or foreign) and international institutions.

Government expenditure corresponds to all non-reimbursable payments by government, whether required or unrequired and whether current or capital, as well as government transactions in debt and equity claims upon others acquired for purposes of public policy.

Government fiscal balance corresponds to government overall surplus/deficit and is defined as total revenue less total expenditure. In ESA95 it is also referred to as net lending/net borrowing (B9).

For African countries, the **external debt** (total outstanding debt) is the amount, at any given time, of disbursed and outstanding contractual liabilities of residents of a country to non-residents to repay principal, with or without interest, or to pay interest with or without principal. It is the sum of public and publicly-guaranteed short and long-term debt, private non-guaranteed short and long-term debt and the use of IMF credit.

For European countries, the **government debt** is defined as the total consolidated gross debt at nominal value at the end of the year in the following categories of government liabilities (as defined in ESA95): currency and deposits (AF.2), securities other than shares excluding financial derivatives (AF.3, excluding AF.34), and loans (AF.4).

Consumer price indices (CPIs) measure the change over time in the prices of consumer goods and services acquired, used or paid for by households. They show the cost of acquisition of a basket of goods and services purchased by the average consumer. Weights for the computation of the index numbers are obtained from household budget surveys.

Harmonised Indices of Consumer Prices (HICP) are a set of European Union consumer price indices (CPIs) calculated according to a harmonised approach and a single set of definitions. They are designed for international comparison of consumer price inflation. The CPIs presented for the European countries are HICPs. HICPs are not strictly comparable with national CPIs.

Definitions

Industrial production index provides a measure of the volume trend in value added at factor cost over a given reference period. In practice, however, value added is not available on a monthly basis in most countries. Therefore, data is generally collected for variables other than value added, with possible alternatives including gross production values, volumes, turnover, work input, raw material input, energy input. The production index is a volume index, which should cover NACE sections B (**mining and quarrying**), C (**manufacturing**) and D (electricity, gas, steam and air conditioning supply). For European countries, data are adjusted by working days.

Electricity production is the process of creating electricity from other forms of energy. Electrical energy covers electricity generated in all types of power plants (e.g. in nuclear, thermal, hydro, wind, photovoltaic or other plants) to be distributed to consumers through the grid or consumed locally. The gross electricity generation at the plant level is defined as the electricity measured at the outlet of the main transformers, i.e. the consumption of electricity in the plant auxiliaries and in transformers is included. The production of electricity includes, on the one hand, public utilities, whose primary purpose is to generate and transmit electric energy to the public, and on the other, private self-production units that produce electric energy intended, in whole or in part, for their own use. It is measured in terms of kilowatt hour (KWh).

Hydro-electricity refers to potential and kinetic energy of water converted into electricity in hydroelectric plants.

For African countries, **arrivals of non-resident tourists** refers to all persons checked at the frontier travelling for pleasure, health, business, meetings or studies and stopping in that country for twenty-four hours or more. The figures exclude immigrants and residents in a frontier zone.

For European countries, **arrivals of non-residents tourists** refers to persons travelling in a given area that is outside their country of residence and staying in collective accommodation establishments. An arrival is defined as a person who arrives at a collective accommodation establishment and checks in. **Collective tourist accommodation establishments** include hotels and similar establishments, specialised establishments (health establishments, work and holiday camps, conference centres and accommodation in collective means of transport), and other collective establishments (such as holiday dwellings, tourist campsites and social tourism accommodation).

Number of mobile phone subscriptions per 1 000 inhabitants give the number of subscribers per 1 000 inhabitants to the services of the operators offering mobile telecommunication connected to an automatic public mobile telephone service using cellular technology. It also includes pre-paid cards.

Definitions

Balance of payments statistics are based on the International Monetary Fund's (IMF) Balance of Payments Manual (fifth edition). It is a record of a country's international transactions with the rest of the world. This is equivalent to the transactions between residents of a country and non-residents. The balance of payments is divided up into the current account, capital account and financial account.

The **current account** gauges a country's economic position in the world, covering all transactions (other than those in financial items) that involve economic values and occur between resident and non-resident entities. The four main components of the current account are defined as follows:

- Trade in goods
- Trade in services
- Income, which covers two types of transactions: compensation of employees paid to non-resident workers or received from non-resident employers, and investment income accrued on external financial assets and liabilities.
- Current transfers, which include general government current transfers, for example transfers related to international cooperation between governments and payments of current taxes on income and wealth, and other current transfers, for example workers' remittances, insurance premiums (less service charges), and claims on non-life insurance companies.

Under the balance of payment conventions, transactions which represent an inflow of real resources, an increase in assets, or a decrease in liabilities (such as, exports of goods) are recorded as credits, and transactions representing an outflow of real resources, a decrease in assets or an increase in liabilities (such as, imports of goods) are recorded as debits. Net is the balance (credits minus debits) of all transactions with each partner.

Current account balance is the sum of net trade in goods and services, net income and net current transfers.

Services balance (current accounts) is defined as credits (exports) minus debits (imports) of services. Services include transportation (freight and passenger transportation); travel; communication services; construction services; insurance services; financial services; computer and information services; royalties and license fees; other business services (which includes miscellaneous business, professional and technical services); personal, cultural, and recreational services; and government services.

Trade balance (current accounts) is equal to credits (exports) less debits (imports) of goods, both measured on the "free-on-board" (f.o.b.) basis – that is, by the value of the goods at the border of the exporting country. Cost-insurance-freight (c.i.f.) is not included. Goods cover general merchandise, goods for processing, repairs on goods, goods procured in ports by carriers, and non-monetary gold.

In international trade statistics, **exports** cover transactions in goods (sales, barter, gifts or grants) from residents to non-residents.

In international trade statistics, **imports** cover transactions in goods (purchases, barter, gifts or grants) from non-residents to residents.

Foreign direct investment (FDI) is the category of international investment made by an entity resident in one economy (direct investor) to acquire a lasting interest in an enterprise operating in another economy (direct investment enterprise). The lasting interest is deemed to exist if the direct investor acquires at least 10% of the voting power of the direct investment enterprise.

Inward flows of FDI (or FDI flows in the reporting economy, or FDI inflows) are direct investment transactions by foreigners in enterprises resident in the reporting. These statistics are based on the OECD's Benchmark Definition of Foreign Direct Investment, third edition (developed in line with the IMF's Balance of Payments Manual, fifth edition).

Official Development Assistance (ODA) relates to grants or concessional loans (i.e. with a grant element of at least 25 percent), undertaken by the official sector, whose main objective is the promotion of economic development and welfare. It is defined as net disbursements for Official Development Assistance (ODA) at market prices to the countries of the Development Assistance Committee (DAC) list of recipients.

- via one of the sales agents of the Publications Office of the European Union (http://publications.europa.eu/others/agents/index_en.htm)

The European Union and the African Union

A statistical portrait

This “statistical portrait” presents, in 100 pages, a broad comparison between the situation of the European Union, including EFTA members and Candidate Countries, and the African Union and its member states. The publication is jointly produced by Eurostat and the Statistical Division of the African Union Commission (AUSTAT) on the basis of data from both organisations.

With data up to and including the year 2010, this “portrait” includes various domains such as demography, health, education, national accounts, trade, and more. Tables in the eight chapters help the user to gain a detailed view on different aspects, such as mobile phone subscriptions, number of teachers, life expectancy, GDP, tourism, etc.

An overview chapter presenting statistical comparisons with the rest of the world is also included.
